RISK MANAGEMENT MANAGER

I. DEFINITIONS

RISK MANAGEMENT MANAGER

Positions allocated to this title definition perform program management functions related to risk management and safety in a major university setting.

Positions at the UW System are responsible for managing the risk management functions, and for overall responsibility for a complex operation which is geographically diverse with unique or high risk exposures and managing the majority of risk management functions including property, liability, environmental, worker's compensation, and safety. Unique or high risk exposures include having a very large and diverse property program. These positions function at a very high level of independence and interact with management throughout the agency.

Representative Positions:

UW System Administration, Risk Manager - Under the administrative guidance of the Director, this position is responsible for administering the state statutes pertaining to property and liability matters that may impact the UW System. This includes establishing policies and guidelines for 13 four-year campuses and 13 two-year campuses to ensure that the objective of Risk Management is met and UW System assets are preserved through the minimization of loss at all campuses at the least possible cost.

II. QUALIFICATIONS

The qualifications required for these positions would be determined at the time of recruitment.

III. RELATED POSITION TITLES

Environmental Specialist, Environmental Health Specialist, Waste Management Specialist, or Risk Management Officer
