A Consultative Approach to Online Course Design Eileen Horn, M.S.

Background

At UW Extended Campus, instructional designers (IDs) work closely with faculty to develop online programs. Faculty enter into the design process with a range of experiences. For those with little or no experience designing an online course, the consulting ID often teaches best practices for designing a course and teaching online. In the current model of consultation, that part of the process is informal. The goal of this study was to describe how and when IDs facilitate learning regarding online course design and teaching, and to answer the following questions:

- Is it possible and worthwhile to formally recognize the learning that occurs during the work of course development?
- How would this change the consultative approach to course design presently used?

By analyzing the strategies currently used by IDs during online course design, we can begin to answer these questions.

Preliminary Findings and Next Steps

Preliminary results indicate strong evidence of coaching practices and paying attention to faculty motivation throughout the consultation process (Group A, Table 1).

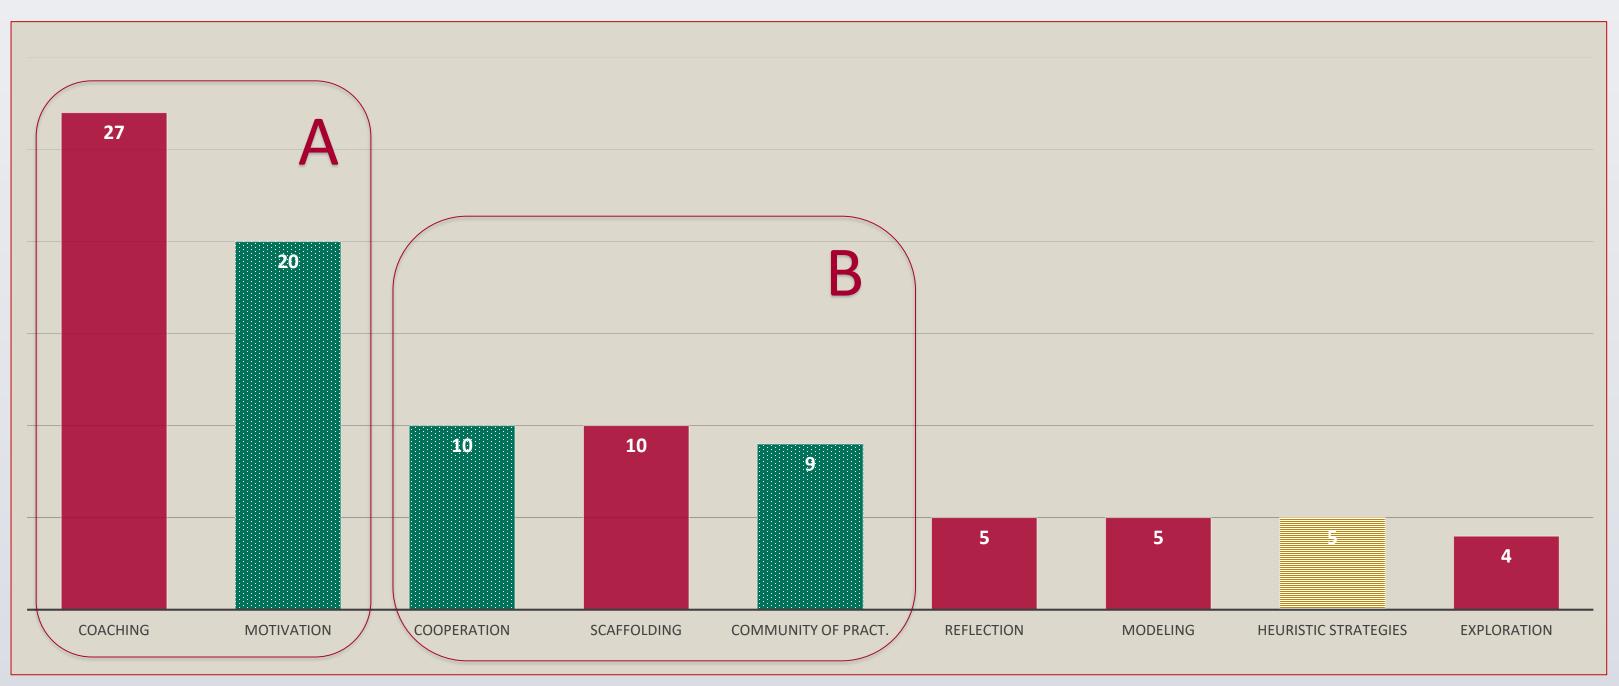

Table 1: Evidence of Practices used in the Cognitive Apprenticeship Model of Instruction The second tier of evidence (Group B, Table 1) shows that these IDs also worked to create an environment where cooperation and community of practice are valued. Evidence suggests that they are using teaching methods and trying to create learning environments as part of the course development and revision process. This shows clear alignment with the cognitive apprenticeship model. With second level coding and continued analysis, specific and actionable insights about teaching within ID practice are gained.

This project received generous support from the UW System Office of Professional Development (OPID) and UW Extended Campus Executive Director, Aaron Brower. Acknowledgements Special thanks also to Fay Akindes, Ryan Anderson, Amy Lane, Heather Pelzel, Alison Staudinger, and the 2019-2020 WTFS Cohort for your guidance and inspiration.

Four IDs from UW Extended Campus self-selected to participate. Two participants have over ten years of experience working as an ID while the other two have five to ten years. All four participants have advanced degrees in the field of education, and three reported experience working formally as a teacher.

Through structured interviews, participants discussed current approaches to course development. The interviews focused on how IDs manage relationships, what influences their processes and decision-making, and the resources used during online course design. A review of existing literature on instructional designer competencies and inquiry-based approaches to faculty development indicated that there might be evidence of the cognitive apprenticeship model of instruction (Collins, et al. 1991) within UW Extended Campus instructional design practice. Using qualitative research processes, first level coding was deductive and searched for evidence of cognitive apprenticeship dimensions and practices.

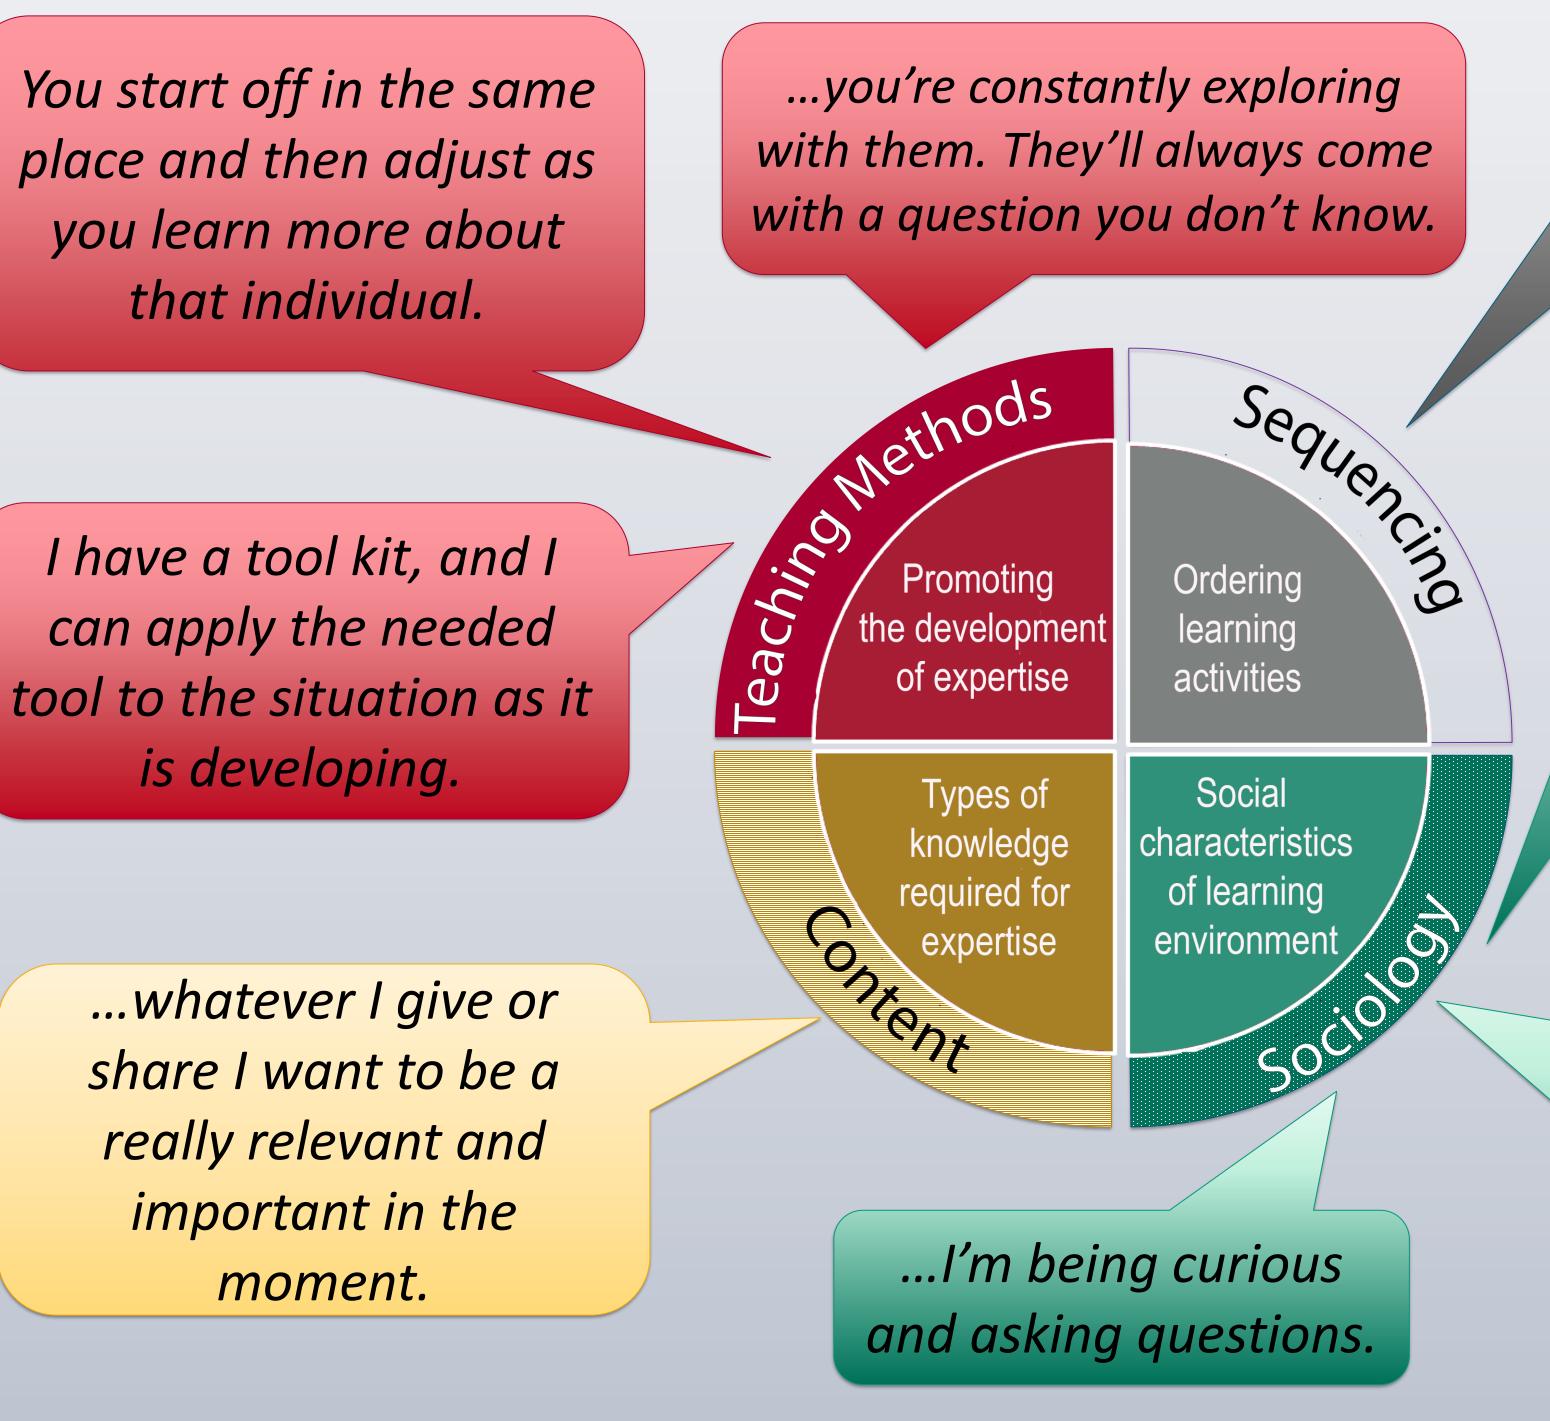

is developing.

I find with somebody new I recommend more check ins, at least in the beginning.

We've gradually been able to build trust where she knows that when I suggest something there's a legitimate reason why.

I'm wanting to find out what they're thinking, what they want to do, what they think their options are.
