

How to Change Where the nVision Client Opens for Layouts

When you click “Open Layout” on the main nVision client screen (or “Nvsuser” file), you should see the following starting location:

`SFSPROC2-E:\sfs\fsprod\nvision`

If your client opens to another location, you can configure it to open to the correct location by doing the following:

- **Double click** the *Configuration Manager853.rdp* file which you should have on your desktop. It was included in the nVision client set up package.
- The screen will open to the *Startup* tab.

Configuration Manager 8.53
